

NICK CINERA

Full-Stack Trading Systems Engineer | Low-Latency UI, Event-Driven Architecture, Capital Markets

New York, NY | 386-212-8631 | nicolas.cinera@gmail.com | linkedin.com/in/nickcinera | github.com/Extrieve

Goldman Sachs engineer building latency-sensitive trading platforms across React, TypeScript, Redux, AG Grid, Java, and WebSocket. Owns production workflows end-to-end: low-latency UI rendering, event-driven distributed systems, server-authoritative streaming models, feature-canary migrations, release configuration, and trader-facing reliability. Adept at using AI workflows and agentic coding systems to accelerate codebase navigation, design exploration, debugging, test generation, and technical writing while keeping validation rigorous.

CORE STRENGTHS

Trading Systems: Equity derivatives RFQ/RFS, DCM new issue workflows, pricing grids, P&L / fees, investor analytics	Frontend: React, TypeScript, Redux Toolkit, redux-observable / RxJS, AG Grid Enterprise, Cypress, Jest, Karma/Jasmine	Backend & Platform: Java, WebSocket, REST APIs, distributed systems, Node.js, Python, Go, SQL, Docker, AWS, CI/CD
Performance: Low-latency frontend performance, large-grid rendering, diff-based streaming, state synchronization, payload reduction	Ownership: End-to-end delivery, cross-team release engineering, migration planning, production hardening	Foundations: Algorithms, C/C++, Java certification, machine-learning graduate study, competitive-programming leadership
AI Workflows: Agentic coding systems, repo-aware code generation, AI-assisted debugging/refactoring, test scaffolding, review prep	Systems Design: Server-authoritative projections, normalized/denormalized models, event handlers, shared domain libraries	Delivery Quality: Production reliability, canary rollouts, parity validation, regression discipline, feature flags, safe migration sequencing

EXPERIENCE

Goldman Sachs - Software Engineer, Global Markets - Equities | New York, NY Apr 2025 - Present

- Technical owner for a real-time, multi-leg pricing grid used by traders to price and structure equity-derivatives RFQ/RFS inquiries; owns the React/TypeScript UI, Java server tier, WebSocket stream, and declarative release configuration.
- Migrated a legacy client-heavy pricer to a server-authoritative, event-driven streaming architecture behind a feature canary, running old and new paths in parallel through layout/parity validation before retiring legacy code.
- Implemented server-computed table layouts spanning tabs, columns, nested per-leg child grids, expansion state, styling, formatting, and cell renderers so the client stays thin and optimized for interaction/rendering.
- Modeled both normalized and denormalized projections for the same portfolio, enabling single-table and per-leg nested-grid views from a shared server-side layout engine and preserving parity with legacy trader workflows.
- Reduced redundant per-tick WebSocket payloads by publishing only changed table structure through value-equality / diff-based streaming and removing fields serialized on every market or valuation event.
- Delivered 378 commits across 1,437 files over 12 months (+55,204 / -19,575 LOC), including 188 commits on the pricing-grid/data layer and 35 of 38 server-tier commits in the core pricing engine.
- Uses AI-assisted and agentic engineering workflows for codebase search, implementation planning, refactor decomposition, test-case ideation, and review checklists while grounding changes in local builds, specs, and production constraints.

Goldman Sachs - Software Engineer, Investment Banking - Debt Capital Markets | New York, NY Feb 2023 - Apr 2025

- Owned two production trading applications used daily by syndicate bankers, traders, and capital-markets originators for bond and loan new-issue workflows: investor targeting, demand aggregation, pricing/allocation, trade booking, and P&L / fee reconciliation.
- Built AG Grid-heavy React/TypeScript surfaces across two state paradigms: a Redux Toolkit / Module Federation investor-analytics host and a classic Redux + redux-observable syndicate-link platform.
- Maintained a Module Federation host that loaded federated investor-analytics remotes with runtime-injected origins across dev / QA / prod while keeping shared React/Redux dependencies singleton-safe.
- Built a cross-tab user-preferences framework for major grid views, persisting per-user column order, visibility, widths, pin state, and drag/reorder rules while unifying CSV/Excel export behavior with on-screen layout.
- Owned the syndicate-link P&L tab end-to-end, including GS Fees, Controllers Flash, Synd Fees, and Deal Table grids, with editable cell navigation, dirty-field highlighting, precision rules, value setters, and audit labeling.
- Led an investor-participation query workflow from input form to API, grid, and export, including multi-currency demand aggregation, conversion toggles, incompatible-mode suppression, export parity, and user-group tab gating.
- Managed Funds Flow integration through versioned NPM packages and branch-conditional CI install rules so integration testing could float against upstream releases without destabilizing production trains.
- Drove framework and dependency migrations across managed CI/CD pipelines, including React 17 to 18, AG Grid 23 to 30, node-sass removal, Highcharts upgrades, LaunchDarkly SDK upgrades, GS UI Toolkit upgrades, and Node/NPM version bumps.

Goldman Sachs - Software Engineer Intern | Dallas, TX Jun 2022 - Aug 2022

- Returned full-time after internship; built production engineering context in a regulated financial-services environment.

EDUCATION, CERTIFICATIONS & LEADERSHIP

University of South Florida - M.S., Computer and Information Systems - Machine Learning

Dec 2022

Concentration

- Technical Chairman, USF Society of Competitive Programmers; led ICPC-style preparation, coached students through algorithmic problem solving, and built training around data structures, complexity, correctness, and reasoning under constraints.
- Oracle Certified Professional, Java SE 8 Programmer II; Oracle Certified Associate, Java SE 8 Programmer. Bilingual English / Spanish.
