

# NICK CINERA

## Trading Systems Engineer | Real-Time UI, Client/Server Architecture & Workflow Platforms

New York, NY | 386-212-8631 | nicolas.cinera@gmail.com | linkedin.com/in/nickcinera | github.com/Extrieve

Trading systems engineer with 3+ years at Goldman Sachs delivering desk-critical equity-derivatives and capital-markets platforms. Leads complex React/TypeScript/AG Grid delivery at the client/server boundary, integrating Java/WebSocket services, versioned real-time subscriptions, typed edit workflows, and controlled migrations. Proven ownership from requirements and architecture through testing, rollout, and production support.

### TECHNICAL EXPERTISE

**Frontend:** React, TypeScript, JavaScript, Redux Toolkit, redux-observable/RxJS, AG Grid Enterprise, Module Federation, Cypress, Jest, Karma/Jasmine

**Systems & Integration:** Java, WebSocket, REST APIs, Node.js, Python, SQL, RxJS, event-driven architecture, server-driven projections, versioned snapshot/delta subscriptions, typed contracts

**Trading & Delivery:** Equity derivatives RFQ/RFT (request-for-quote/request-for-trade) workflows, including RFS support, DCM new issuance, pricing grids, workflow modeling, CI/CD, LaunchDarkly, canary rollouts, production hardening

**Technical Leadership:** End-to-end feature ownership, cross-functional requirements, architecture migrations, testing and rollout strategy, production support, ICPC coaching, and AI-assisted engineering with human validation

### EXPERIENCE

**Goldman Sachs** - Software Engineer, Global Markets - Equities | New York, NY Apr 2025 - Present

- Own client and integration delivery for a real-time, multi-leg pricing grid used by equity-derivatives traders across RFQ/RFT/RFS workflows, spanning React/TypeScript, AG Grid, Redux/RxJS, typed Java/WebSocket contracts, release configuration, and production support.
- Led client-side adoption of a server-authoritative, event-driven table architecture alongside the legacy path, maintaining feature-canary controls and compatibility for incremental desk rollout without disrupting trader workflows.
- Built the config-driven rendering and editor layer for server-supplied tabs, tables, nested leg views, column schemas, and interaction metadata, keeping complex domain projection out of React components.
- Implemented typed cell-edit workflows with select/dropdown behavior, no-op filtering, durable commands to the authoritative backend, and a separate autocomplete/reference-data query path.
- Integrated versioned snapshot/delta subscriptions and RxJS external-store row delivery into high-frequency AG Grid workflows, using equality guards and stale-state handling to preserve correctness and avoid unnecessary work.
- Delivered approximately 100 tracked work items across client, configuration, testing, release, and production support in 12 months; partnered with backend and platform teams to validate parity and harden the new path.

**Goldman Sachs** - Software Engineer, Investment Banking - Debt Capital Markets | New York, NY Feb 2023 - Apr 2025

- Owned two production capital-markets applications used daily for bond and loan new-issue workflows, from investor targeting and demand aggregation through pricing, allocation, trade booking, and P&L/fee reconciliation.
- Built dense, keyboard-driven React/TypeScript and AG Grid workflows across Redux Toolkit, Module Federation, and redux-observable/RxJS, integrating real-time updates, REST services, authorization, and complex financial rules.
- Created reusable grid-preferences and export capabilities that preserved per-user layouts and kept CSV/Excel output aligned with on-screen order, visibility, widths, pinning, and precision.
- Delivered P&L/fee editing and investor-participation workflows end-to-end, including tab-and-enter navigation, dirty-state cues, multi-currency aggregation, API integration, authorization gating, and export parity.
- Operated a Module Federation host and versioned partner-package integrations across development, QA, and production, using branch-aware CI rules to test candidate releases without destabilizing production.
- Led React 17-to-18 and AG Grid 23-to-30 migrations plus Node, styling, feature-flag, and shared-toolkit upgrades across managed CI/CD pipelines.

**Goldman Sachs** - Software Engineer Intern | Dallas, TX Jun 2022 - Aug 2022

- Earned a return offer after building production engineering experience in a regulated financial-services environment.

### EDUCATION, LEADERSHIP & CREDENTIALS

**University of South Florida** - M.S., Computer & Information Systems (Machine Learning) Dec 2022

- Technical Chairman, USF Society of Competitive Programmers - prepared and coached students for ICPC competitions, teaching data structures, algorithms, complexity analysis, correctness, and systematic problem solving under time constraints.
- Oracle Certified Professional, Java SE 8 Programmer II; Oracle Certified Associate, Java SE 8 Programmer | Bilingual English/Spanish
